Site and Office Integration

The Gold Standard EHS Solution to Save Time

The Procore and HammerTech integration offers gold-standard visibility for both the jobsite and office across construction management and jobsite operations. When side by side, every worker and subcontractor connects to all EHS workflows in one place. Safety, supervisors and project managers see increased engagement, productivity and overall jobsite operation visibility with digital JHAs, pre-task plans, observations, booking and permits and much more.

Job Ready, Compliant Trades

Subcontractors are job ready—earlier with improved pre-start communication and a free portal to submit pre-start documents, qualifications and training records.

Avoid start-up delays

Save time with digital orientations. On average, one in two workers completes orientations before arriving on-site and site teams save one hour per day.

Increase jobsite and labor hour visibility

Crowdsource daily report efforts from every subcontractor with live labor hours and sign-in/sign hour and automation from HammerTech. View daily activity to keep jobs on track with detailed drill-down in one place for inspections, observations, pre-start readiness KPI's, bookings and much more.

Save time with more efficient site processes

Trade partners are connected to all EHS and jobsite operations digitally so you can review and provide feedback remotely and up to 57% faster. Focus coaching efforts to improve EHS compliance and send people home safely.

RABREN GENERAL CONTRACTORS

Integration at a Glance

Labor Hours

Hours by subcontractor and worker numbers automatically sync to the Procore Daily Log. Subcontractors have mobile access to submit hours by worker in HammerTech. Prevent double entry, quickly review and approve hours on mobile for increased confidence in recorded hours.

Vendors

Subcontractors (Vendors) created in Procore automatically show in HammerTech. With bi-directional options, subcontractors assigned to projects sync in Procore or HammerTech to improve the visibility of subcontractor performance between the jobsite and office.

Project Information

Projects created in Procore are automatically created in HammerTech to improve governance and performance tracking. Includes start/end dates, project value, address and more.
